The Role of Research Integrity and Publication Ethics in University Education for the 21st Century

By Deborah C. Poff, CM, PhD

Abstract

In this broad overview of integrity in university education for the 21st century, I will begin with a discussion of the modern university today. I will then move to a brief description of student violations of research integrity in the teaching context for both undergraduate and graduate students. Next, I will provide a framework for faculty integrity as well as integrity commitments for academic administrators in terms of the core mission of universities to facilitate knowledge and create and disseminate new knowledge. Finally, I will conclude the discussion with aspirational recommendations as core foundational principles for universities going forward.
